

How Portfolio Workbench works

Portfolio Workbench is a personal project management application that lets you catalog, organize, and edit a portfolio of work samples. Projects can be public or private, with rich metadata including name, description, why it was built, status, dates, and associated artifacts (images, videos, documents). The app works in two modes: as a local-first editor (running on your machine during development) or as a hosted web interface connected to GitHub for remote editing and syncing.

The interface features a carousel-based project browser on the home page, inline editing capabilities for project fields, media upload and management, and AI-assisted project drafting from repository analysis. Private projects require Windows Hello authentication to unlock, while public projects are immediately visible and editable (when connected to GitHub).

Portfolio Home (Project Index)

Browse and search through all projects in a carousel view with filtering and search capabilities.

Controls

- Left/Right arrows or keyboard navigation to browse projects in the carousel
- Dot navigation buttons to jump to a specific project

Project Detail

Display full project information with editable fields, artifact carousel, and management options.

Design System Components

A comprehensive library of reusable UI components and design tokens for consistent product interfaces.

◆

PRIVACY

Public

Ready to share.

STATUS	STARTED	UPDATED	REPOSITORY
Shipped	Jan 15, 2023	Mar 8, 2024	github.com/example/design-system

Why it was built

The product teams were spending significant time rebuilding the same components across different projects. This fragmentation led to inconsistent user experiences and slower development cycles. I created a centralized component library and design system to establish a single source of truth for UI patterns, reducing duplication and accelerating feature development.

Evidence from the work

Images, documents, and recordings stored alongside this project.

+ Add media

Controls

- Inline edit pencil buttons for name, description, status, date, and repository URL fields
- Previous/Next arrows and dot buttons to navigate through artifacts (images, videos, documents)

Add Project (Local Editor)

Create a new project locally with AI-assisted repository analysis and comprehensive form fields.

LOCAL EDITOR

Add a project.

Capture what it is, why you built it, and where it stands.

- Writes to your project folder

Available while `npm run dev` is running. Creating asks for your device unlock.

DRAFT FROM THE CODE

Fill in with AI.

Give AI a source-code repository to inspect, then review the short project draft before saving it.

Read-only analysis

Analyze a repository

Public or private

Paste the main GitHub, Azure DevOps, GitLab, or Bitbucket address. The PC analyzes a temporary copy, then removes it.

Repository address

https://github.com/owner/repository

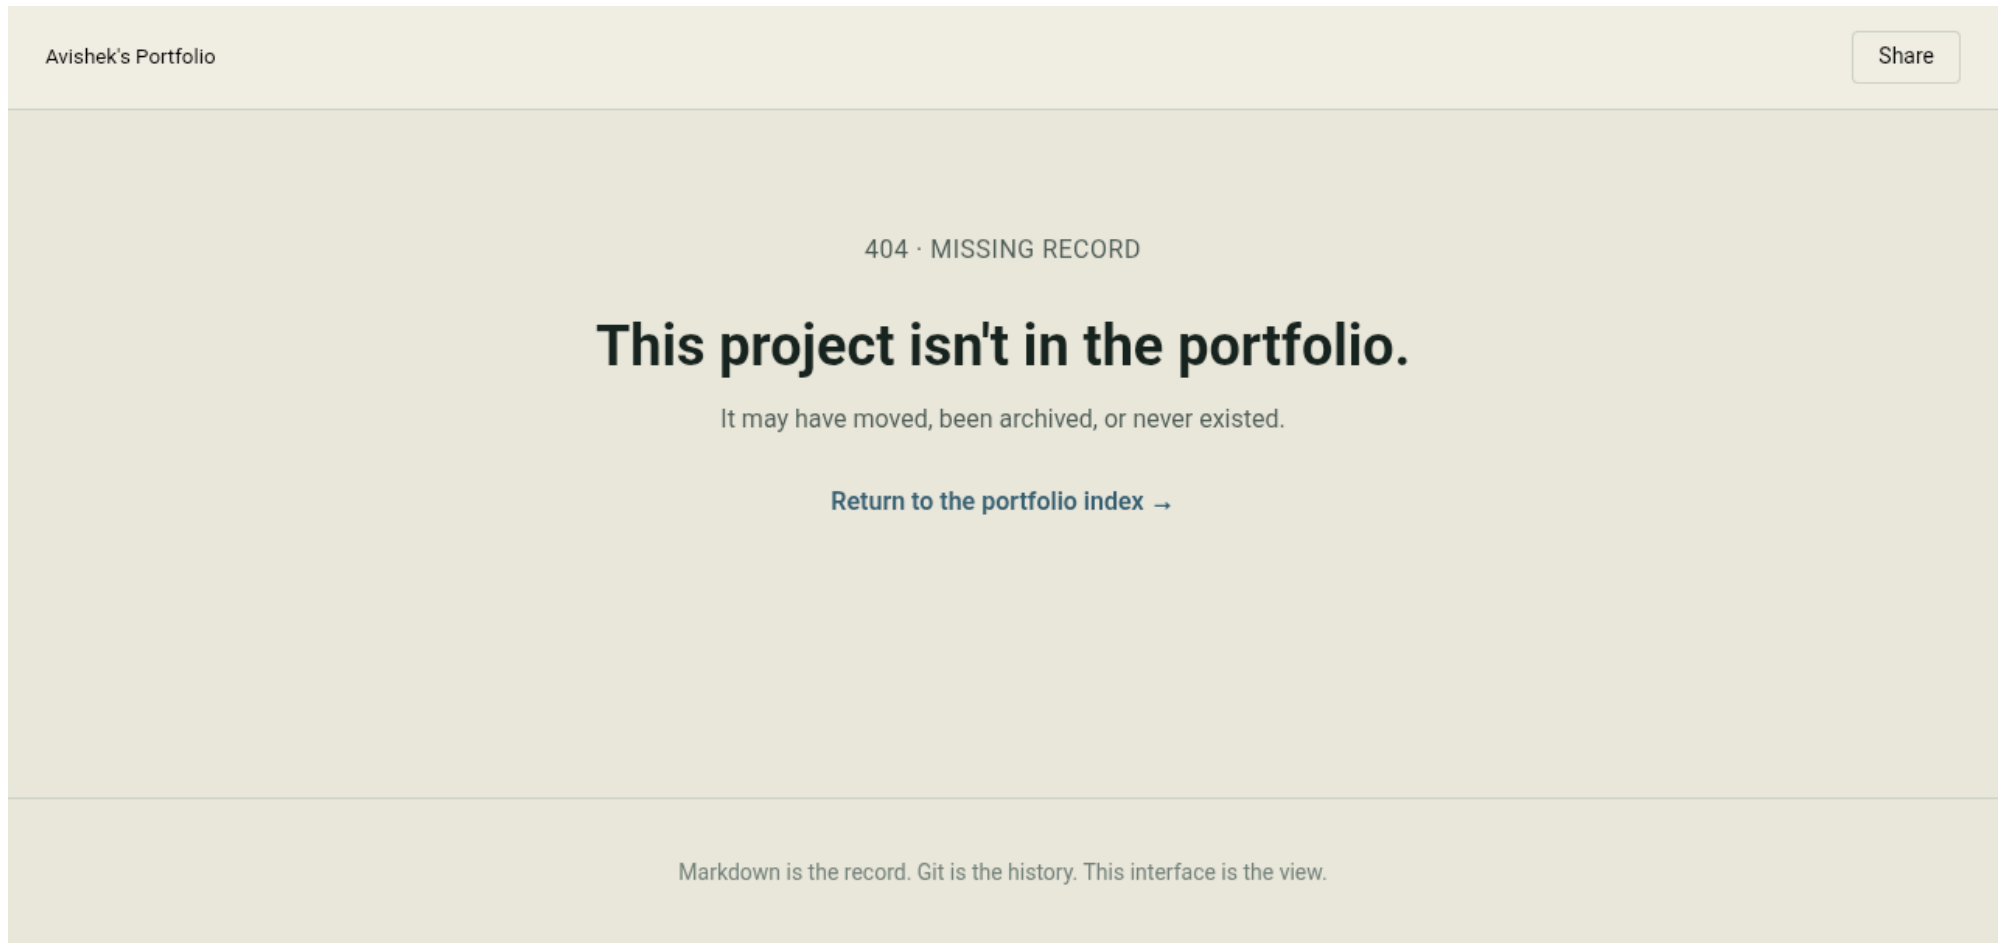

If a private repository cannot be opened, the app will ask you to sign in safely.

Controls

- Repository URL input field
- "Analyze exact facts" and "Analyze + infer why" buttons to populate form from GitHub repo

Not Found (404)

Display a helpful message when a requested project does not exist.

Controls

- Return to portfolio index link
